التوزيع في الضرب

حلّ التمارين الآتية بواسطة قانون التوزيع: - (بيّن طريقة حلك)

1) $4 \times 26 = (4 \times 20) + (4 \times 6) = 80 + 24 = 104$

مثال:

2) $28 \times 5 = 20 \times \underline{\hspace{1cm}} + 8 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

3) $13 \times 9 = 10 \times \underline{\hspace{1cm}} + 3 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

4) $3 \times 21 = 20 \times \underline{\hspace{1cm}} + 1 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

5) $8 \times 14 = 10 \times \underline{\hspace{1cm}} + 4 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

6) $7 \times 32 = 7 \times 30 + 7 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

7) $4 \times 19 = 10 \times \underline{\hspace{1cm}} + 9 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

8) $54 \times 6 = 50 \times \underline{\hspace{1cm}} + 4 \times \underline{\hspace{1cm}} = \underline{\hspace{2cm}}$

9) $36 \times 3 = 3 \times \underline{\hspace{1cm}} + 3 \times 6 = \underline{\hspace{2cm}}$
