

APRENDIENDO A SUMAR Y RESTAR FRACCIONES

Es hora de poner en práctica lo aprendido, resuelve las siguientes sumas y restas.

FRACCIONES HOMOGENEAS

$$\frac{5}{2} + \frac{10}{2} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{9}{3} - \frac{7}{3} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{9}{5} + \frac{11}{5} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{8}{3} - \frac{7}{3} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{2}{8} + \frac{15}{8} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{10}{7} - \frac{8}{7} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

FRACCIONES HETEROGENEAS

$$\frac{5}{7} + \frac{15}{2} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\frac{6}{5} - \frac{7}{9} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\frac{1}{2} + \frac{1}{5} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\frac{9}{2} - \frac{10}{3} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\frac{20}{3} + \frac{1}{8} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$\frac{1}{7} - \frac{7}{6} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$
