

Review Vocabulary

Vocabulary Term	Definition	Example Sentence
Industrial Revolution	a period of rapid industrialization and technological advancements that took place in the 18th and 19th centuries.	The Industrial Revolution changed the way people lived and worked.
economy	the system by which a country's resources are produced, distributed, and consumed.	The Industrial Revolution helped the economy grow by creating new jobs and industries.
inventions	new and useful devices or ideas that have been created.	Many important inventions were made during the Industrial Revolution, such as the steam engine and the telegraph.
pollution	the presence or introduction into the environment of substances or things that are harmful or have a harmful effect.	Factories during the Industrial Revolution caused pollution by releasing smoke and chemicals into the air.
working conditions	the environment and circumstances in which people work, including factors such as hours, safety, and cleanliness.	The working conditions in factories during the Industrial Revolution were often dangerous and unsanitary.

Read and Take Notes

One good thing about the Industrial Revolution was that it helped the economy grow. Factories were built, and more people had jobs. Before this time, people had to rely on their family or special talents to find work. But now, they could work in factories and earn money for themselves. This gave them a chance to change their lives and make a better future for themselves.

Another positive thing about the Industrial Revolution was that it inspired people to come up with new ideas and inventions. People like Andrew Carnegie became very rich because of the opportunities that the Industrial Revolution brought. They used their wealth to create new things and make life better for everyone. They made things like better buildings and machines that could do more work. This made life easier and more comfortable for people.

But not everything about the Industrial Revolution was good. There were some negative things too. One bad thing was that the pollution got worse. Factories and homes made a lot of pollution, and it made the air and water dirty. This caused people to get sick and made the weather strange. Another bad thing was that the working conditions in factories were not good. People had to work long hours in dirty and dangerous places. Even children had to work in factories instead of going to school. This was not fair to them and made their lives very hard.
