

Read the definition. Write the concept.

- The menstrual cycle stops when women are around 50.
- An ovary releases an ovum into one of the fallopian tubes.
- The uterus releases the ovum if fertilisation did not occur.

Read the information about the male reproductive system.
Choose and write the correct meaning of the words below.

The **main** purpose of the male reproductive system is to fertilise a woman's ovum in order to produce a baby. This is done through the production, **maintenance** and then transportation of sperm and a protective fluid, called semen, to the woman's ovum. The scrotum is the organ that **houses** the testicles, which are responsible for sperm production. The male reproductive system maintains itself by producing and **secreting** male sex hormones.

- | | | | | |
|----------------|----------------|-------------|----------------|-------------|
| 1 main: | a big | b small | c large | d principal |
| 2 maintenance: | a preservation | b relax | c relief | d carry |
| 3 houses: | a cares for | b accustoms | c watches | d holds |
| 4 secreting: | a emitting | b observing | c transporting | d smelling |

- 1- **Main** means the same as _____ .
- 2- **Maintenance** means the same as _____ .
- 3- **Houses** means the same as _____ .
- 4- **Secreting** means the same as _____ .
