Impact 3 - Unit 5: *Writing a Classification Essay about Flight*

Write a classification essay of 110–130 words talking about flying machines. Use the table of information below.

Evolution of Flight

a. Kite was the earliest form of flying machine. It was made looking like

b. In 1903, something changed the course of history. The Wright brothers invented a powered airplane, with engine. Engines and wires in the plane control the gravity and make it move in different directions.

c. Centuries later, DaVinci modelled a plane that looked like bat's wings.

d. Otto Lilienthal came up with hang gliders. That was the earliest form of an aircraft. The wings and the tail of the glider were inspired by birds.

e. Now people can travel anywhere in the world within 24 hours. Airplanes are also used to transport goods, and the smaller versions are used for various purposes such as emergencies and scientific research.

The ability to fly had always haunted people as a thought until the 1850s, when they started to build the drawn models using natural materials such as woods.

As time progresses, human beings get more and more innovative. Maybe we will be able to fly to other galaxies with evolved machines soon, who knows!
