

**I.** *Read the text below and answer the questions*

Water pollution is becoming more and more serious in Vietnam.

It is mainly caused as a result of improper discharge of household and industrial chemicals wastes into the water bodies. These dangerous chemicals (in the form of solid, liquid or gases) mixes with water and make it unsafe for living bodies.

Water pollution brings a lot of bad effects to people. Water pollutants cause harm to human-beings, animals, trees and other constituents of environment.

**In conclusion**, we need to increase the sense of responsibility among the community members in order to reduce water pollution. **For example**, we must save water and treat garbage before releasing it into the environment.

1. How is the water pollution in Vietnam nowadays?
2. What are the causes of water pollution?
3. What form are industrial chemicals in?
4. Who/What do water pollutants cause harm to?
5. What can we do to reduce water pollution?

**II.** *Read the text again. Match each paragraph in the text with its purposes*

1. Describe the effect of water pollution.
2. Describe the cause of water pollution.
3. State the problem: water pollution in Vietnam.
4. Suggest solutions for water pollution.
