

Unit 2: Foundation of Life. The Cell.

3) Fill the gaps with the correct words. (carbon, complex, environments, chemical elements, inorganic, hydrogen, organic, simple)

1. The biosphere consists of all living things and their _____.
2. Living and non-living things are formed of _____ in different proportions.
3. In living things, the most abundant elements are _____, _____, oxygen and nitrogen. They are formed mainly of _____ substances. This includes many _____ compounds that contain carbon.
4. Non-living things are mostly formed of _____ substances.
5. In general, inorganic matter include _____ compounds that do not contain carbon.

4) Fill the gaps with the correct words (nutrition, vital, reproduction, sensitivity)

Living things carry out three life processes: _____ (to get energy and nutrients), _____ (relationship) and _____ (to get offspring).

"They are also called _____ functions."

5) Indicate which of the following organisms are unicellular and which are pluricellular.
