

- 6 Carta pengelasan menunjukkan rangka utama manusia.
Classification chart shows the main skeleton of human.

Organ yang dilindungi oleh X ialah
The organs protected by X is/are

P : Otak
Brain
Q : Peparu
Lungs
R : Ginjal
Kidney

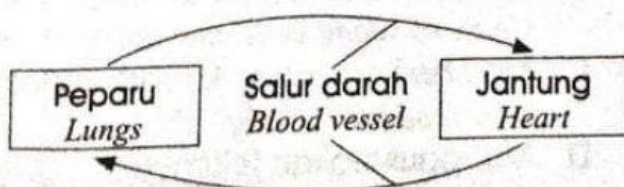

- 7 Berikut adalah kepentingan rangka X.
The following is the importance of skeleton X.

X — Untuk sokongan
For support
Membantu pergerakan badan
Helps in body movement

Gambar yang manakah mewakili rangka X?
Which picture represent skeleton X?

- 8 Rajah menunjukkan dua bahagian utama dalam sistem peredaran darah manusia.
Diagram shows two important parts of human blood circulatory system.

Salur darah menghubungkan peparu dengan jantung kita.
Blood vessels connect our lungs to the heart.

Apakah fungsi salur darah?

What is the function of blood vessel?

- A Mengepam darah ke seluruh tubuh
Pumping blood to all part of body
B Menyingkirkan bahan kumuh
Removes excretory products
C Tempat pertukaran gas
Gas exchange place
D Mengangkut darah ke seluruh tubuh
Carry blood throughout the body

9

Berdasarkan situasi di atas, sistem yang manakah terganggu?

Based on the above situation, which systems are disturbed?

- I Sistem pernafasan
Respiratory system
II Sistem peredaran darah
Blood circulatory system
III Sistem rangka
Skeletal system
IV Sistem pencernaan
Digestive system
A I dan III
I and III
B II dan III
II and III
C I dan IV
I and IV
D II dan IV
II and IV

- 10 Rajah menunjukkan suatu rangka manusia.
Diagram shows a human skeleton.

Apakah fungsinya?

What is its function?

- A Melindungi otak
To protect brain
B Melindungi organ dalaman
To protect internal organs
C Menyokong tubuh
To support body
D Membantu proses pernafasan
To help breathing process
