

# RESEARCH ON TEMPERATURE CHANGE

Form groups of three. Research and devise a portable storage box that will keep the drinks hot. Include a creative title and use this space to introduce your research.

## OBJECTIVE

What is the expected outcome of the research?

## METHODOLOGY

- What materials have you used?
- How did you test the device created?
- How did you collect data for the research?
- How will these data be analyzed?

## RESULTS

Highlight significant outcomes in bullet form.

- Did the research achieve the expected outcome?

## VISUALS AREA

Put illustration or photo of the device. You can also place graphs to visually show the results of the research.

## ANALYSIS

- Which materials releases more heat?
- How does the change in the number of materials affect the temperature of the drinks inside the device?

## CONCLUSION

Summarize the study by stating the main points you want your audience to remember. You can also add recommendations for future research.
