

Daniel Agila

Water is Life!

Fresh water is necessary for the survival of all living organisms on Earth. Our bodies are made up of about 60% water and we cannot survive more than a few days without it.

Benjamin Jaramillo

Water is a precious substance that meets our physical needs while at the same time being of great spiritual importance to many people. Water is also an integral part of many ecosystems that support us and other species.

Sayuri Imbacuan

Most of earth's water is 97% percent water that is found in oceans.

Viviana Rodriguez

Only 3% Fresh water

Ariana Pulloquinga

Less that 1% is fresh water available for human use.
