

(Type the answer in the box given)

Natural Selection

"A mechanism of evolution in which members of population that have certain traits become adapted to _____ and those traits are _____ on to the next generation"

Choose the correct description about Natural Selection

Members of a population that are most successfully adapted to the environment are more likely to be eliminate

Acts on genotypes instead of phenotypes

Preserves individuals with favourable phenotypes & eliminates the unfavourables.

Increase the allele frequency in the population.
