

Parts of the Eye

Amazing Fact:

Women blink twice as much as men, but babies don't blink as much as adults.

Challenge:

Match up the parts of the eye to the description of what they are and how they naturally protect our eyes. Then label the diagram.

Eyebrows

Eyelid

Eyelashes

Orbit

Iris

Pupil

This is the colored part of the eye. It controls how much light can enter your eye.

This is the black part of the eye which lets the light in.

These are small hairs that protect eye from dust.

It is made of thick hair that protects the eye from water and sweat.

It is a cavity where eyes are hidden inside to protect the eye from shocks.

This opens and shuts. It helps people to sleep and protects the eye from strong light and wind.

Label the diagram below:

Name: _____
