Outdoors

Song by: Jason Mraz

All day I've been inside And I've got the feeling
I'm trapped between the walls And underneath the ceiling
I feel a bit off track
And I'm trying to get back
Back in the cool, cool air where the sun is shining
Nothing's going to stop me
It's all in the timing

It's finally again my turn
 It's time to return
 'Cause I won't stay inside no more
 No more
 I can't wait to go
 Outdoors
 Well open up your door and be like me
 Open up your door and then breathe free
 And look at all the beauty you'll feel
 Loved, loved, loved, loved
 Listen to the music of the wind and the brides sing
 We're just one big family
 And all of nature deserves to be
 Loved, loved, loved, loved, loved
 So, I won't stay inside no more
 No more
 It can't wait, I'm sure
 There's need to run and hide
 Let's go explore
 It feels so great let's go outdoors

 (Don't cha do)
 Everyone come on
 come on out there
 where the air is fresh and clear

 So, I won't stay inside no more
 No more
 It cannot wait
 Let's go out doors

 Well, open up your door and be like me
 Open up your door and then breathe free

 And look at all the beauty and you'll find
 The earth and the sky is yours

 So please go, there's no need,
 There's no need to hide inside
 Let's go explore
 This will, this will feel so great
 Let's go outdoors

Question for number 42-45

Human body is made up of countless millions of cells. Food is needed to built up new cells and replace the worn out cells. However, the food that we take must be changed into substances that can be carried in the blood to the places where they are needed. This process is called digestion.

The first digestive process takes place in the mouth. The food we eat is broken up into small pieces by the action of teeth, mixed with saliva, a juice secreted by glands in the mouth. Saliva contains digestive juice which moisten the food, so it can be swallowed easily.

From the mouth, food passes through the esophagus (the food passage) into the stomach. Here, the food is mixed with the juices secreted by the cells in the stomach for several hours. Then the food enters the small intestine. All the time the muscular walls of the intestine are squeezing, mixing and moving the food onwards.

In a few hours, the food changes into acids. These are soon absorbed by the villi (microscopic branch projections from the intestine walls) and passed into the bloodstream.
