

PHOTOSYNTHESIS SONG

Plants
make their
own food!

Photosynthesis (4)

Plants don't have a
Like you and me (no, no no)
But they have to (yum!)

So they spread their leaves so green
To capture sunlight's

Plants don't have a
Like you and me (no, no no)
But they have to

Did you know their leaves so
Can take in air and make it ?
(That's amazing, that's cool!)

That's (4)

Plants can't hold a cup 
Like you and me (no, no, no)
But they have to (ah!)

So they push their roots deep down
To soak up water from the

Plants don't wear green hats
Or shirts, or
So why are they
(why, why, why, why) ?

It's because all plants are filled
(With what?)
With green stuff we call chlorophyll
Chlorophyll?

(Rachel says) Chlorophyll is the
green pigment, or color, found in
plants.

It helps them trap
And without it, there'd be no...
Photosynthesis (4)

Plants can make their very own

With sunlight, water and
(so good)

That's because all plants are filled
With green stuff we call

That's Photosynthesis (4)

That's Photosynthesis (4) (yeah!)
