Inner Planets vs. Outer Planets

Directions: Drag the characteristics that describe inner planets under inner planets. Drag the characteristics that describe outer planets under outer planets. Drag the characteristics that describe both inner and outer planets to the center.

loser to the sun	orbits the sun	shorter length of year	gas giants	rocky surface	smaller in size	
hicker atmosphere	few moons	large in size	zero rings	atmosphere mostly th	in has mass	
otates on its axis	has rings	has many moons	warm	er temperatures spher	e shaped	
ooler temperatures	longer length of year	shorter orbit	around the sun	longe	r orbit around the sun	
located between the asteroid belt and the sun		located after the asteroid belt		i	farther from the sun	
	Inner Planets			Outer Plane	ets
