Oduvai Gorge, known as the \_\_\_\_\_(1), is a 50-kilometer-long gorge where ancient ancestors lived.

In 1959, Louis and Mary Leakey discovered an ancient ape-like \_\_\_\_\_(2) at Oduvai Gorge, a significant prehistoric site.

The gorge has played a crucial role in enhancing our understanding of \_\_\_\_\_(3).

A small museum near the Serengeti road provides information on the gorge's \_\_\_\_\_(4).

Oduvai Gorge continues to be one of Africa's most famous archaeological sites, yielding fossils for \_\_\_\_\_(5) in volcanic ash.

The earliest evidence of mankind in the NCA was found near Oduvai Gorge, where hominids left \_\_\_\_\_(6) about 3.6 million years ago.

Shifting Sands, near the museum, is a phenomenon created by the volcano Aldo neo Lengai, with a \_\_\_\_\_(7) dune of magnetic ash blowing westward.
