In and Out Function Tables and Graph

Complete the function table by rewriting the expressions with the value of x and finding y as done in the example. Then graph your coordinate pairs on the graph below.

$x = 10$			
equation	substitution	value of y	coordinate pair
$y = x - 9$	$y = 10 - 9$	$y = 1$	$(10, 1)$
$y = x - 8$			$(\quad , \quad)$
$y = x - 7$			$(\quad , \quad)$
$y = x - 6$			$(\quad , \quad)$
$y = x - 5$			$(\quad , \quad)$
$y = x - 4$			$(\quad , \quad)$
$y = x - 3$			$(\quad , \quad)$
$y = x - 2$			$(\quad , \quad)$
$y = x - 1$			$(\quad , \quad)$
$y = x - 0$			$(\quad , \quad)$
