

Directions: You are given the definition of a term in psychology. Correctly determine which term the definition lines up with.

1. The study of how individuals think, feel, and behave in social situations.
2. Learning by forming associations between two stimuli, such as a bell and food in Pavlov's experiments.
3. A psychological perspective that emphasizes the study of observable behavior and the role of the environment in shaping behavior.
4. The ongoing debate about whether genetics or environment has a greater impact on who we are.
5. The study of how individuals grow, change, and develop from infancy through adulthood.
6. A perspective emphasizing human potential, growth, and the importance of self-awareness and acceptance.
7. A perspective that explores the influence of unconscious drives and conflicts on our behavior.
8. A psychological approach that focuses on observable behaviors and how they're influenced by our environment.
