

John woke up feeling unwell. He had been experiencing a persistent cough, accompanied by a sore throat and a slight fever for the past few days. Concerned about his health, he decided to schedule an appointment with his family doctor. Upon arrival at the clinic, John was greeted by the receptionist and asked to fill out some paperwork detailing his symptoms.

Soon, John was called into the examination room, where he met with his doctor. He described his symptoms, mentioning his cough, sore throat, and fever. The doctor listened attentively and proceeded to conduct a thorough examination. After checking John's temperature, throat, and listening to his chest, the doctor suspected that John might have developed a respiratory infection, possibly bronchitis.

To confirm the diagnosis, the doctor ordered some tests, including a throat swab and a chest X-ray. John underwent the tests and anxiously awaited the results. Once the results were in, the doctor confirmed that John indeed had bronchitis, a common respiratory condition characterized by inflammation of the bronchial tubes.

The doctor prescribed antibiotics to help treat the infection, along with cough syrup to alleviate John's symptoms. Additionally, the doctor advised John to get plenty of rest, stay hydrated, and avoid exposure to cold weather.

Leaving the clinic with his prescription in hand, John felt relieved to have a diagnosis and a treatment plan in place. He thanked his doctor and vowed to follow the prescribed regimen diligently in hopes of getting better soon.

**1. What symptoms did John experience before visiting the doctor?**

- a) Headache and stomach pain
- b) Cough, sore throat, and fever
- c) Muscle aches and fatigue
- d) Dizziness and nausea

**2. What was the suspected illness that the doctor mentioned?**

- a) Influenza
- b) Bronchitis
- c) Pneumonia
- d) Allergic reaction

**3. What treatment did the doctor prescribe for John's condition?**

- a) Painkillers and antacids
- b) Antibiotics and cough syrup
- c) Antihistamines and nasal spray
- d) Corticosteroids and inhalers

**4. What advice did the doctor give to John regarding his recovery?**

- a) Avoiding sugary foods
- b) Staying indoors all day
- c) Getting plenty of rest and staying hydrated
- d) Exercising vigorously every day

**5. How did John feel after leaving the clinic?**

- a) Anxious and worried
- b) Relieved and reassured
- c) Frustrated and irritated
- d) Indifferent and apathetic

**6. Which of the following was NOT part of the prescribed treatment for John's condition?**

- a) Antibiotics
- b) Painkillers
- c) Cough syrup
- d) Inhalers

**7. What can be a good title for the text?**

- a) "A Visit to the Doctor: Dealing with Respiratory Symptoms"
- b) "John's Journey to Recovery "
- c) "Navigating Illness: John's Encounter with Medical Care"
- d) "Understanding Respiratory Infections: John's Story"

**8. What can be inferred from the text?**

- a) John's symptoms were severe enough to look for medical attention.
- b) The doctor diagnosed John with pneumonia.
- c) John's visit to the doctor resulted in a misdiagnosis.
- d) The doctor prescribed herbal remedies for John's condition.
