

Is Recycling a Waste of Time?

Recycling is a topic that gets many people talking. Some say it's very important. Others wonder if it's a waste of time. The truth is, recycling has a big impact on our planet.

"Recycling is not a waste of time," says Mia Green, an environmental campaigner. "It's a crucial effort to save our environment." She explains that recycling helps to reduce rubbish.

When we recycle, we separate our waste. Glass goes in one bin, paper in another, and plastic in a different one. This makes it easier to process and reuse these materials. Recycling helps to reduce the amount of waste. It means less rubbish is burned or put into the ground. This is good because doing that can harm the environment. They can cause pollution and take up a lot of space.

Mia says, "Recycling takes a little effort, but it's worth it." She believes that everyone should recycle. It's a small action that can make a big difference.

Some people think recycling is a waste of time. They say it takes too much effort. But recycling is becoming easier. Many places have simple systems for recycling.

Recycling can also save resources. It uses less energy than making new things. This is good for our planet. It helps to protect natural resources.

"It's not just about throwing things away," Mia says. "It's about thinking how we can reuse them." She encourages people to think before they throw things away.

Recycling is an important part of caring for our environment and it's an effort we all should make. Every piece of rubbish we recycle can help our planet.

1. What does Mia Green say about recycling?
 - It reduces your bills.
 - It's important for the environment.
 - It can be a waste of time.
2. What do we do when we recycle things?
 - Organise our rubbish.
 - Keep plastic in the house.
 - Send many containers back to the shops.
3. Why is recycling good for the environment?
 - It saves a lot of water.
 - It cleans the air.
 - Less rubbish goes into the ground.
4. Why is making more new things bad?
 - It uses more energy.
 - It takes more time.
 - It means more factories.
5. What does Mia Green say we should think about more?
 - How old things can be sold.
 - How old things can be used again.
 - How new things can be thrown away.

The Californian Gold Rush

The Californian Gold Rush was a very important time in American history. It started in 1848 when gold was found in California. This discovery made many people excited and hopeful.

People from all over the world came to California to find gold. They dreamed of becoming rich quickly. This time was called the Gold Rush because so many people were rushing to find gold.

The Gold Rush changed California a lot. Before the gold was found, not many people lived there. But during the Gold Rush, thousands of people came. Towns and cities started to grow very fast.

A historian, Dr. Emily Johnson, says, "The Gold Rush was more than just finding gold. It was a time of big changes for California and America. Many people came to live in America because of the Gold Rush."

Finding gold was not easy. Many people worked very hard, but did not find much gold. Life was difficult for the gold seekers. They lived in camps and faced many challenges.

Even though not everyone found gold, the Gold Rush was still important. It helped the economy of California and America. The Gold Rush made California an important part of the United States.

Today, people still remember the Gold Rush. It is a big part of California's history. Dr. Johnson says, "The Gold Rush shows us how a discovery can change everything. It changed the lives of many people and the history of a place." The Californian Gold Rush is a story of hope, hard work, and big changes.

1. Why did people come to California during the Gold Rush?
 - To get rich.
 - To buy land.
 - To work in factories.
4. Why did the Gold Rush change the economy of California?
 - Many people arrived.
 - A lot of gold was sold.
 - Many factories were built.

2. How did the Gold Rush affect the population of California?

- Many people left to look for a job.
- There was a big increase.
- The population stayed the same.

3. What was it like looking for gold during the Gold Rush?

- Easy money.
- Hard work.
- Dangerous.

5. What does Emily Johnson say about the Gold Rush?

- People will always want gold.
- It is still continuing today.
- Places can change quickly.

The Hedgehog

The hedgehog is a small, interesting animal. It is known for its spiky back. Hedgehogs are found in gardens and forests. They are very special creatures.

Hedgehogs eat different kinds of food. They like insects and worms. Sometimes, they eat fruit and vegetables. Their diet is varied and helps them stay healthy.

A wildlife expert, Dr. Emily Ford, says, "Hedgehogs have a unique diet. They play a key role in controlling garden pests. This is important for the environment."

Hedgehogs make their homes in quiet places. They like areas with leaves and branches. These materials are good for building nests. A hedgehog's home is cosy and safe. In the winter, hedgehogs do something interesting. They hibernate. This means they sleep for a long time. Hibernation helps them survive the cold.

"Hibernation is vital for hedgehogs," explains Dr. Ford. "It helps them conserve energy during winter. This is when food is scarce."

Hedgehogs are mostly active at night. This is called being nocturnal. They search for food in the dark. It's safer for them this way. Hedgehogs have good senses. They can hear and smell very well. These senses help them find food. They are clever animals.

Sadly, hedgehogs face some problems. Their numbers are going down. This is due to changes in the places where they live. People can help by making gardens safe for them.

Dr. Ford suggests, "Creating a friendly space for hedgehogs can make a big difference." We can all help these special animals. They are an important part of nature.

1. Why is the hedgehog famous?

- It is very large.
- It has colourful fur.
- It has a spiky back.

2. What is the best thing to give a hedgehog to eat?

- Some chicken.
- Some chocolate.
- An apple.

3. Why are hedgehogs important for gardens, according to Dr. Emily Ford?

- Because of the holes they dig.
- Because of what they eat.
- They make the garden look pretty.

4. What do hedgehogs do during winter?

- They sleep.
- They eat very different foods.
- They change colour.

5. How can people help hedgehogs?

- Giving money to hedgehog charities.
- Giving them food.
- Making changes in their gardens.
