English Grade 2-READING COMPREHENSION PRACTICE

Read the passage carefully and answer the questions about it. This is a SELF-CHECK activity. Answers are provided for your checking.

JELLYFISH

Jellyfish live in the ocean.

They can be clear or can be colors like pink, yellow, or blue.

Jellyfish are invertebrates, which means they do not have a backbone.

They also do not have a brain, eyes, or heart. Their bodies have tentacles, which they use to sting their prey.

Jellyfish eat crabs, fish, plants, and other jellyfish. They will also sting people if they touch them, which really hurts!

Jellyfish have to stay away from sea turtles, who will try to eat them.

Let's learn some more about jellyfish!
