MODALS OF PREDICTION & POSSIBILITY

A Complete the technology predictions for 2050 with *will, won't, could, might,* or *may*. Use *probably* when you can. Sometimes there is more than one possible answer.

My technology predictions for 2050

The Home

I'm sure that all the simple jobs like washing dishes and cleaning the house [1]_____ be automated. We [2]_____ use robots that are built for a particular job, or I guess we [3]_____ have larger, functional robots that can do a lot of jobs. I think this is less likely, however.

I'm certain that the home [4]_____ become a system with different parts that communicate with each other. Humans [5]_____ have to do any jobs about the house ever again! In fact, I'm almost certain of that!

Travel

There [6]_____ be any gas cars. It's not certain, but it is likely that governments [7]_____ make them illegal. And I think there [8]_____ be more driverless electric cars than regular ones—but that's just my opinion. I [9]_____ be right. Who knows?

Shopping

In the future, stores [10]_____ exist. No stores—imagine! It is a real possibility, but not at all certain. Actually, I think there [11]_____ be fewer stores and malls, but there [12]_____ definitely be some.
