

Fill in the blanks 9

#47 Mars Mission

Most likely a Mars mission will require most of the necessary supplies and equipment by unmanned spacecraft to the chosen landing area and their operable condition before the first even arrive. During their long, confined stay, the Mars pioneers may live in an inflatable modular housing unit as a possible for the U.S. crew quarters on the International Space Station. The cylindrical structure would be 27 ft. in and have a foot-thick protective shell when The shell would be made of almost two dozen layers of material that is stronger than steel. It would also provide from the extreme Martian temperatures that range from -128.3°C during the polar night to 26.6°C at the The module would consist of four levels, for work, health care, crew quarters, and a galley area. The space travelers will drive for miles across the planet's diverse in advanced-type roving vehicles equipped with specialized tools, drills, and instruments. Much of their time will be spent searching for water and past and present of Martian life forms, and conducting a wide range of scientific activities that cannot be by robotic exploration.

#23 Johnson

At supper Johnson talked of good eating with uncommon "Some people," said he, "have a foolish way of not minding, or pretending not to mind, what they eat. For my part, I mind my belly very, and very carefully; for I look upon it, that he who does not mind his belly will hardly mind anything else," He was, for the moment, not only serious but "Yet I have heard him, upon other occasions, talk with great contempt of people who were anxious to gratify their palates; and the 206th number of his Rambler is a masterly essay against His practice, indeed, I must acknowledge, may be considered as casting the balance of his different opinions upon this subject; for I never knew any man who good eating more than he did.

#24 At Table

When at table, he was totally absorbed in the business of the moment; his looks seemed riveted to his plate; nor would he, unless when in very high company, say one word, or even pay the least attention to what was said by others, till he had satisfied his, which was so fierce, and with such, that while in the act of eating, the veins of his forehead swelled, and generally a strong was visible. To those whose sensations were delicate, this could not but be disgusting; and it was doubtless not very suitable to the character of a philosopher, who should be distinguished by self-command. But it must be owned, that Johnson, though he could be rigidly ABSTEMIOUS, was not a TEMPERATE man either in eating or drinking. He could refrain, but he could not use He told me, that he had fasted two days without inconvenience, and that he had never been hungry.

#26 French Cook

He about the same time was so much displeased with the of a nobleman's French cook, that he exclaimed with vehemence, "I'd throw such a rascal into the river", and he then proceeded to alarm a lady at whose house he was to sup, by the following of his skill: "I, Madam, who live at a variety of good tables, am a much better judge of cookery, than any person who has a very tolerable cook, but lives much at home; for his palate is gradually adapted to the taste of his cook;....., Madam, in trying by a wider range, I can more..... judge." When invited to dine, even with an intimate friend, he was not pleased if something better than a plain dinner was not prepared for him. I have heard him say on such an occasion, "This was a good dinner enough, to be sure; but it was not a dinner to ASK a man to." On the other hand, he was wont to express, with great, his satisfaction when he had been entertained quite to his mind.
