

Science Day: Feeding a Growing Population

The science department (1) a discussion next Monday from 3:00 to 4:00 about the future of food, and all students are invited to attend. According to science teacher Mr. Yamada, “Scientists think there (2) nearly ten billion people on Earth in 2050. As population increases, we (3) need more food. We (4) continue raising animals for food, because it uses a lot of energy.”

According to Yamada, this is where the science gets interesting. “To feed everyone in 2050, (5) meat in laboratories.” Yamada also says that scientists are working on new ways to grow food. “Right now, researchers (6) with new ways of growing food, for example growing in tunnels under the ground,” he explains. “In 2050, underground farmers (7) worry so much about the weather!”
