

## Volume of cuboids

Calculate the volumes of the cubes.

volume =   $\text{cm}^3$

volume =   $\text{mm}^3$

How many different ways can you make a cuboid with a volume of  $48 \text{ cm}^3$ ?

L =                  H =                  W =

L =                  H =                  W =

L =                  H =                  W =

The volume of the cuboid is  $60 \text{ m}^3$   
Find the missing length.

Calculate the volume of the cuboid.

volume =   $\text{cm}^3$

Calculate the volume of a cube with side length:

4 cm                  2 m                  160 mm

Volume =                   $\text{cm}^3$

a) Calculate the volumes of the two cuboids.

$\text{cm}^3$

$\text{cm}^3$

What do you notice?

**A book is 11cm wide, 22cm long, and 3cm high. What would be the volume of 8 books stacked together?**

1 book =                   $\text{cm}^3$

8 books =                   $\text{cm}^3$

## Extra 4 Experts

Volume =                       $\text{cm}^3$
