

ACTIVIDAD #4

Tipo de actividad: Multiple-choice

Multiple-choice questions about the previous Reading

- 1. What analogy is used to explain blockchain technology in the text?**
 - A) A decentralized network of computers
 - B) A distributed ledger system similar to a Google spreadsheet
 - C) A centralized database managed by a single authority
 - D) A network of interconnected servers
- 2. What is one of the key features of blockchain technology mentioned in the text?**
 - A) Centralized authority managing transactions
 - B) Distributed ledger accessible to all participants
 - C) Limited access to transaction data
 - D) Lack of cryptography to secure the network
- 3. What role does the blockchain open source community play in the advancement of the industry?**
 - A) Developing proprietary blockchain platforms
 - B) Creating open source projects for commercial use
 - C) Providing tools and frameworks for enterprise solutions
 - D) Limiting access to blockchain technology

4. Which platform is described as an open-source project under the Hyperledger umbrella?
- A) Quórum
 - B) Corda
 - C) Hyperledger Fabric
 - D) Enterprise Ethereum
5. What distinguishes Hyperledger Sawtooth from other blockchain platforms?
- A) It utilizes Proof of Work (PoW) as the consensus mechanism
 - B) It is a permissionless blockchain network
 - C) It emphasizes privacy and scalability
 - D) It is a fork of the Ethereum codebase
6. What is a characteristic feature of the OpenChain architecture?
- A) It relies on chains of blocks for storing transaction information
 - B) It provides a highly centralized network structure
 - C) It offers limited scalability and robustness
 - D) It links transactions directly without forming blocks
