

AQUATIC KINGS CRUELLY KILLED

Increasing shark sighting and attacks along the Western Australian coast have caused the government to act. A culling program has been started but is the best solution.

Imagine being viciously ripped from your bed in the middle of the night. **Imagine being** shot for no reason by a security guard while doing your shopping. **Imagine being** trapped in a net while playing in the park and being left to starve. Would you be happy to be maimed and killed? This happens to sharks every day. Sharks are becoming a problem at Perth beaches. However, most people believe that these **magnificent creatures** should be **protected** and not **culled**. Sharks should not be culled because they are important for the food chain. They also have rights and the ocean is there home. Sharks also important for the environment. That is why the defenceless sharks must be protected. STOP the culling now!
