Stephanie is having a birthday party at her house. She invited some friends.

1. Stephanie made pink, light blue, light green, yellow, and purple cupcakes. If she made one box of cupcakes for each of the color and each box has 12 cupcakes, how many cupcakes did Stephanie make?

2. Stephanie's mom also baked some goodies. If she baked 8 pans of goodies for 45 minutes each and there are 16 cookies per pan, how many cookies did her mom bake?

3. They planned to serve some juice as well. If they make 12 pitchers of drinks and each pitcher can fill 10 glasses, how many glasses of drinks are they making?

4. They decided to hold the party in their backyard. They have 10 tables, and each table is 16 feet long and has 14 chairs. How many chairs do they have for the guests?

5. At the end of the party, Stephanie gave away some treats to her 15 closest friends. If each of them received 3 treat items, write an equation for how many souvenirs Stephanie gave away?
