

Guided Practice

- 1 Arrange 48 chairs equally into 8 rows.

$$48 \div 8 = \square$$

There are $\square$ chairs in each row.

$$8 \times \square = 48$$

$$\text{So, } 48 \div 8 = \square.$$

- 2 Place 63 cookies equally onto plates. There are 7 cookies on each plate.

$$63 \div 7 = \square$$

There are $\square$ plates of cookies.

$$7 \times \square = 63$$

$$\text{So, } 63 \div 7 = \square.$$

- 3 Divide 54 by 6.

$$54 \div 6 = \square$$

$$\square \times \square = 54$$

$$\text{So, } 54 \div 6 = \square.$$

- 4 There are some bracelets.

- a How many beads are there altogether?

$$9 \times \square = \square \quad \text{or} \quad 6 \times \square = \square$$

- b How many bracelets are there?

$$\square \div \square = \square$$

- c How many beads are there in each bracelet?

$$\square \div \square = \square$$

- d $9 \times \square = \square$, $6 \times \square = \square$,

$$54 \div \square = \square \quad \text{and} \quad 54 \div \square = \square$$

are family facts of multiplication and division.

6 Find the missing numbers.

a $\square \times 7 = 35$ $35 \div 7 = \square$

$7 \times \square = 35$ $35 \div \square = 7$

b $\square \times 4 = 24$ $24 \div \square = 4$

$4 \times \square = 24$ $24 \div 4 = \square$

c $\square \times 9 = 72$ $72 \div 9 = \square$

$9 \times \square = 72$ $72 \div \square = 9$
