Write down the names of the parts of an atom.

Answer the questions.

- What is the smallest particle that makes up everything around us?
 - molecule
 - atom
 - element
 - proton
- How many different types of atoms are there in the world?
 - around 50
 - around 92
 - around 100
 - around 150
- Which of these are the three particles that make up an atom?
 - protons, neutrons, and molecules
 - electrons, neutrons, and ions
 - protons, neutrons, and electrons
 - atoms, molecules, and compounds
- What does the atomic number tell us about an atom?
 - the number of neutrons in the nucleus
 - the number of electrons in the atom
 - the number of protons in the nucleus
 - the sum of protons and neutrons in the nucleus

True or False ?

There are only a few types of atoms, not many.

Atoms can combine to form molecules.

Atoms consist of four particles: protons, neutrons, electrons, and photons.

The atomic number is always equal to the number of electrons in an atom.
