Before the 1970s the Games were officially limited to (3)…….… with amateur status, but in the 1980s many events were opened to (4)…….... athletes.

LIVEWORKSHEETS

Currently, the Games are open to all, even the top professional athletes in basketball and football (soccer).

Part 7: Read the following passage and decide if the statements that follow are TRUE or FALSE. (1,0m)

The Moon is approximately 384,400 kilometers from the Earth. Its diameter is 3,479 kilometers, about 1/4 the diameter of Earth. The average temperature on the surface of the Moon during the day is 107°C, hot enough to boil water on Earth. During the night, the average temperature drops to −153°C.

Because of **its** smaller size and mass, the gravity of the Moon is about 1/6 the gravity on the Earth. That means that a person who weighs 180 pounds on Earth would only weigh 30 pounds if measured on the Moon.

The force of gravity from the Moon affects Earth. Its gravity reaches Earth and pulls the oceans toward the Moon, causing the tides. The gravity from the Sun also affects the tides. The highest tides will always occur when the Moon and Sun are aligned. That is when there is a New Moon or a Full Moon.

1/ The Moon's diameter is as long as that of the Earth.

2/ The temperature of the Moon during the day is higher than on Earth.

3/ A person who weighs 240 pounds would weigh 120 pounds if measured on the Moon.

4/ The New Moon appears when the Moon and the Sun are aligned.
