

Chapter 22

Insect's Quiz

Insects are six legged invertebrate animals, i.e., they do not have a vertebral column. Their bodies are supported by a hard outer covering called an exo-skeleton.

Now read the clues and solve the following crossword puzzle by completing the names of the insects:

Across

1. A praying insect, whose front legs are modified as barber scissors to catch and cut apart the prey.
5. A soft bodied beetle which glows at night.
6. The only insect which makes a thing that is edible for humans.
10. Poisonous Australian ants. Their venom is so strong that it can kill humans in just 15 minutes.

Down

2. One of the shortest living insects. Lives for less than 12 hours.
3. These insects construct the longest insect nest in the world, having a height of 10-12 m.
4. A common insect which makes our food dirty by sitting on it, and infesting it with germs.
7. Swarms of this insect can eat away and destroy standing crops within a matter of hours.
8. Which insect is also sometimes called umbrella wasp.
9. Males of this species are the loudest insects in the whole world.
