Solar energy is a long lasting source of energy which can be used almost anywhere. To generate solar energy, we only need solar cells and the sun. Solar cells can easily be installed on house roofs, so no new space is needed and users can quietly generate their own energy. Compared to other renewable sources, they also possess many advantages. Wind and water power rely on turbines which are noisy, expensive and easy to break down. Solar cells are totally silent and non-polluting. As they have no moving parts, they require little maintenance and have a long lifetime.

However, solar energy also has some disadvantages. We can only generate solar energy during daytime because the system depends on sunlight. Besides, solar cells require large areas to work effectively. The main disadvantage of solar energy is that it costs about twice as much as traditional sources such as coal, oil and gas. This is because solar cells are expensive. Scientists are hoping that the costs of solar cells will reduce as more and more people see the advantages of this environmentally friendly source of energy.

21. What does the passage primarily discuss?

- A. The cost of solar energy
B. Advantages and disadvantages of solar energy
C. Solar energy as an alternative for fossil fuels
D. Solar energy's advantages over other sources of energy

22. What does the word they in line 4 refer to?

- A. other renewable resources B. solar energy users
C. advantages D. solar cells

23. What is NOT an advantage of solar cells?

A. They cost little to produce.

B. They operate quietly.

C. They require little maintenance.

D. They are non-polluting.

24. Which of the following is the main disadvantage of solar energy mentioned in the passage?

A. Solar cells require large areas to operate.

B. It is unfriendly to the environment.

C. It is expensive.

D. It depends on sunlight.
