

Electromagnetic Induction

1		To generate an induced current in the coil, which of the following actions must be performed? - Moving the magnet in direction 1 - Moving the magnet in direction 2 - Not moving coil/magnet in direction 1 or 2 - Moving the coil in direction 1 - Moving the coil in direction 1															
2	In which of the following systems can an induced current be generated? Select all that apply by clicking the box. <table border="1"> <tbody> <tr> <td data-bbox="183 616 694 761">  </td><td data-bbox="694 616 1268 761">  </td><td data-bbox="694 616 1268 761">Moving magnet inside/outside coil</td></tr> <tr> <td data-bbox="183 761 694 952">  </td><td colspan="2" data-bbox="694 761 1268 952">Rotate coil between two magnet</td></tr> <tr> <td data-bbox="183 952 694 1187">  </td><td colspan="2" data-bbox="694 952 1268 1187">Moving metal ring around magnetic field</td></tr> <tr> <td data-bbox="183 1187 694 1422">  </td><td colspan="2" data-bbox="694 1187 1268 1422">Place magnet and coil in a fixed position</td></tr> <tr> <td data-bbox="183 1422 694 1568">  </td><td colspan="2" data-bbox="694 1422 1268 1568">Rotate a magnet beside a coil</td></tr> </tbody> </table>				Moving magnet inside/outside coil		Rotate coil between two magnet			Moving metal ring around magnetic field			Place magnet and coil in a fixed position			Rotate a magnet beside a coil	
		Moving magnet inside/outside coil															
	Rotate coil between two magnet																
	Moving metal ring around magnetic field																
	Place magnet and coil in a fixed position																
	Rotate a magnet beside a coil																
3	What equation is shown below? $\Phi = BA \cos \theta$ $\varepsilon = -N \frac{\Delta \Phi}{\Delta t}$
