

Chapter 53

Fish Facts

Fish are vertebrate animals that live in water. They have streamlined muscular bodies and are cold-blood most fish breathe using gills. Some have a typically elongated body covered with scales.

Given below are the descriptions of some fishes with pictures. Name the fish, using the Help Card :

1. This fish is very attractive. It can sell for hundreds or sometimes even thousands of dollars.

2. This elongated fish is a dangerous hunter with strong jaws and sharp teeth.

3. This fish is the largest animal on Earth. This is warm-blooded creature that nurses her young.

4. This is a deep-bodied fish. This fish is considered a prized edible fish worldwide.

5. Except in the Pacific Ocean, this fish is found everywhere. It likes overeating and killing more fish than it can eat.

6. This fish does not have scales, but some of its species are covered with overlapping armour plates.

Help Card

Blue fish, belt fish, whale fish, barracudas, butter fish, carp fish
