

Science is the study of the nature and behaviour of natural things and the knowledge that we obtain about them. Here are some statements taken from scientific concepts.

Read the statements and write the name of the terms :

1. The device that converts chemical energy into electrical energy.
2. Chemical reaction in which a substance combines with oxygen and gives off heat and light.
3. Negative electrode through which an electric current leaves an electrolytic cell.
4. Flow of electrons along a conductor is termed as.
5. Phenomenon in which liquid turns into vapour without necessarily reaching the boiling point.
6. The metal that is composed of more than one element; e.g., brass (copper and zinc).
7. Change of vapour into liquid that takes place when pressure is applied to it or the temperature is lowered.
8. Anything that can act on a stationary body and make it move.
9. Negatively charged sub atomic particle.
10. Splitting of atoms to release energy.
11. Capacity of doing work.
12. The smallest fragment of an element that can take part in a chemical reaction.

Barometer is used to measure atmospheric pressure.
