d What suggestion does the writer make for helping wildlife?

.....

e What kinds of cars does the writer suggest that motorists should get?

.....

Speeding drivers

There are a lot of dangerous drivers around here and the culprit is you! You get up late on Monday, don't have time for breakfast, and tear through the town breaking the speed limit. You could injure half a dozen students on their way to school! Thirty-three percent of us now come to school by car. More of us would walk to school if the roads weren't so dangerous, so please slow down!

Car fumes

Are you driving a fuel-efficient model? When you need a new car, do you even consider getting an electric car or a hybrid? It's not just school pupils who are suffering from asthma – so are adults. Reducing car fumes will mean cleaner air for everyone.

Park and Ride

The 'Park and Ride' system means you can now leave your car outside town and get to the centre quickly using the bus. No one likes sitting in traffic jams, so why aren't you using it?

Wildlife

Driving contributes to pollution, which is harmful to people and to wildlife too. You can help protect our birds and wild creatures by not making unnecessary journeys by car.
