

I'm Mercury! I'm the smallest planet and closest to the Sun.

I'm Saturn! I'm surrounded by a series of icy rings.

I'm Venus! I'm the hottest planet in the Solar System. Ouch!

I'm Uranus! I rotate on a tilt so I look like I'm sideways.

I'm Earth! You call me home. I'm also the only planet with liquid!

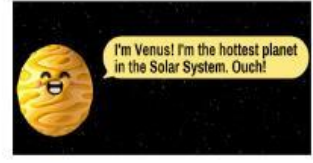

I'm Neptune! I'm the smallest gas giant and farthest from the Sun.

I'm Mars! I'm really dusty and cold with a thin atmosphere.

I'm Jupiter! I'm twice the size of other planets so they call me giant!

SOLAR SYSTEM:

It is the sun, its planets, and other objects that move around the sun

PLANET:

It is a large ball of rock or gas that move around the sun. Earth is our planet

ORBIT:

It is the path a planet takes as it moves around another object

STAR:

It is a big ball of hot gases that gives off light and heat energy. The sun is the closest star to Earth.

CONSTELLATION:

It is a group of stars that forms a pattern
