

The attitude of the scientific community towards the unconscious mind has shifted dramatically in recent years. While once viewed as a lazy **reservoir** of memories and non-task-oriented behavior, the unconscious is now regarded as an active and essential component in the processes of decision-making.

Historically, the unconscious mind was considered to be the source of dreams and **implicit** memory (which allows people to walk or ride a bicycle without consciously thinking about the activity), as well as the storing place for memories of past experiences. But recent research reveals that the unconscious brain might also be an active player in decision making, problem-solving, creativity, and critical thinking. One familiar example of the operation of the unconscious in problem-solving is the well-known phenomenon of the “**eureka moment**” when a solution to a problem presents itself without the involvement of active thinking.

Which is the best title of the paragraph?

- A. Scientists present new findings of the unconscious mind.
- B. Our growing understanding of the role of the unconscious
- C. How humans solve problems
- D. What is a “eureka moment”?
