

PART 4

Questions 15 to 20

Read the texts about three types of vehicles in future. For each question, choose the correct type of vehicle (A, B or C) which fits the description. Write the correct answer A, B or C in the space provided.

A	Cars In future, people won't have to use petrol for cars anymore! Instead, there will mostly be electric cars. People will just get their cars charged at charging stations for just a few minutes, and they can travel for hours! Furthermore, there will be more and more driverless cars with built-in navigational devices that find correct routes.
B	Buses Buses in future will not be on the road with other vehicles. They will have their very own lanes. Bus drivers will no longer need to collect fees from passengers. Passengers will just need to scan their faces and payments will be done. There will be massage chairs for those who want to relax themselves. Since all buses will run on electricity, there will be zero emissions.
C	Trains Future trains will use technology to change the space inside. Luggage areas will be converted into bicycle racks at times of the day when more cyclists are travelling to work. Double-decker trains will operate so that twice as many passengers will be on board. There will be more space for restaurants and play areas for kids. Last but not least, trains will be three times faster!

A	Cars
B	Buses
C	Trains

0.	People spend lesser time travelling by this vehicle.	C
15.	This vehicle finds the correct way to get to the destination.	
16.	People can charge this vehicle.	
17.	This vehicle provides a place for kids to play.	
18.	People scan their faces to make payments in this vehicle.	
19.	This vehicle can be driverless.	
20.	This vehicle provides spaces for bikes.
