Scammers on the Internet

Scammers are people who try to trick others on the internet. They often send fake emails or messages to make people believe they are from a trusted company, like a bank or an online store. These messages might ask for personal information, such as passwords, credit card numbers, or bank details. If someone gives this information, the scammer can steal money or cause other problems.

LIVEWORKSHEETS

Sometimes, scammers pretend to be someone you know, like a friend or family member. They might ask for help, saying they need money quickly. If you don't check carefully, you might send them money, thinking you are helping your loved one.

There are also fake websites that look like real ones. If you buy something from a fake website, you might never receive the product, and your money will be lost.

To protect yourself, always be careful online. Do not give out personal information unless you are sure the website or person is real. Double-check email addresses, and if something looks suspicious, don't click on any links or respond to the message. It's better to ask for help from someone you trust if you are not sure.
