LIVEWORKSHEETS

The twentieth century saw _____ advances in medical knowledge. At the end of the nineteenth century life expectancy was comparatively short for people in Britain and many children did not survive to adulthood. By the end of the twentieth century, however, perinatal mortality was low and many people anticipated living beyond their three score years and ten. This rapid progress _____ as a result of a series of microbiological and technological breakthroughs, along with a political focus on social welfare and public health.

Today, however, we face new threats. Although it had been _____ that infectious diseases would be eliminated, new strains of TB and malaria have recently emerged and are fast _____ themselves. The viral infection, Aids, has reached epidemic proportions in some countries. The incidence of heart disease is increasing, along with other so-called "self-inflicted" illnesses. Superbugs, resistant to our range of antibiotics, continue to evolve.

Predictions for the twenty-first century suggest that we will see the development of our understanding of the_____ of genes in the maintenance of good health. Many diseases will be prevented as screening for susceptibility allows defective embryos to be_____. Those who do get ill, will receive drugs tailored to suit their_____ needs and thus more effective in action. Will there also be surprises awaiting us as the world population ages?
