→ Homo sapiens, who _____.

READING

VIII. Read the passage and choose the correct answer A, B, C, or D.

The ocean covers 70 percent of Earth's surface and contains about 97 percent of all the water on Earth. The ocean makes all life on Earth possible, and makes the planet appear blue when viewed from space.

For thousands of years, people have depended on the ocean as a source of food. It offers human beings a wide range of seafood. Fishers catch more than 90 million tons of seafood each year. Millions of people, from professional fishers to business owners like restaurant owners and boat builders, depend on fisheries for their life.

People also use the ocean as a route for trade. Ships carry loads of goods from continent to continent, country to country. Ocean ports are areas where water and land transportation meet. It is also the meeting point of people of different professions: businesspeople, who import and export goods and services; dockworkers, who load and unload cargo; and ships' crews. Ports also have a high concentration of migrants and immigrants with a wide variety of nationalities, languages, and religions. The busiest ports in the world are the Port of Shanghai in China and the Port of Rotterdam in the Netherlands.
