| 5. A. says | B. warns | C. persuades | D. recommends |

IX. Read the article and complete each sentence with no more than two words and/ or a number taken from the passage.

3D printing technology was introduced in the 1980s and has evolved significantly ever since. A 3D printer turns a whole object into thousands of tiny little layers, then makes it from the bottom-up in layers of material. There are many applications of these printers. For example, they are used to create medical implants, household items, and fashion accessories.

One of the major advantages of 3D printers is that they make use of different kinds of materials like plastic, metal, or food ingredients. Therefore, by using 3D printers, people can reduce material waste. In addition, they can create complex and customised objects that traditional manufacturing methods cannot produce.

However, there are some drawbacks to consider. 3D printing can be time-consuming, especially for large or tiny objects. Also, the cost of purchasing and maintaining a 3D printer can be relatively high. The quality of the printed objects may vary depending on the type of printer and materials used. Certain materials used in 3D printing, such as plastics, may not be as durable as those produced through traditional manufacturing methods.

Despite these drawbacks, the potential applications of 3D printers continue to grow. As technology advances, 3D printing offers even more opportunities for innovation and creativity.

1. In the 3D printing process, the printer builds the three-dimensional object by placing down many _____ of material.
2. 3D printers are useful in many fields such as medical care, home applications and _____.
3. One advantage of 3D printing is that it helps reduce _____.
4. Making too big or small objects with 3D printers can be _____.
5. The printer model and materials may affect the _____ of the three-dimensional object.

X. Read the passage and choose the correct answer A, B, C, or D.

Electronic devices are becoming increasingly popular in today's modern classrooms. Two significant devices are interactive whiteboards (IWBs) and tablets, which are making a great impact on teaching and learning.

An IWB is a large screen connected to a computer. The teacher and students use special pens or touch to control the board and write on it. They can also show videos and do interactive activities on the board. This helps capture students' attention and make the lesson more dynamic. Meanwhile, a tablet, such as an iPad or an Android device, is a handheld computer which students can use for various purposes. For example, they can access e-books, use educational apps, and collaborate with their classmates. School tablets are portable and provide access to a vast resource of educational contents. However, both IWBs and tablets have drawbacks. They are costly, so not all schools can afford them. Besides, there are potential technical issues, and much time and effort are needed to train teachers and students to use them effectively.

While challenges exist, these electronic devices help create a more interactive and engaging learning environment in today's classrooms. Therefore, schools should consider using them appropriately.

1. What is an essential requirement for an IWB to operate?
 - A. It must be connected to a computer.
 - B. It must have a special pen.
 - C. It must be controlled by the teacher.
 - D. It must capture students' attention.
2. According to the text, who tends to use a school tablet?
 - A. The teacher
 - B. The students
 - C. The teacher and the students
 - D. The manager
3. Which of the following is an advantage of school tablets?
 - A. Their durability
 - B. Their reasonable cost
 - C. Their simple operation
 - D. Their portability
4. What can be a drawback of electronic devices in modern classrooms?
 - A. Many schools don't want to use them.
 - B. Teachers may be less skilled in using them than students.
 - C. Training how to use them may be time-consuming.
 - D. Much effort is needed to persuade school managers of their usefulness.
5. Which of the following information is NOT mentioned in the article?
 - A. A description of IWBs and tablets
 - B. Activities that teachers and students can do with IWBs and tablets
 - C. Downsides of IWBs and tablets
 - D. Solutions to the problems of IWBs and tablets
