Noni : Excuse me, Mr.
Abid. May I ask you some question?
Mr. Abid :Okay, sure, Noni!
Noni : What do you know about energy sustainability?
Mr. Abid : _____ definitions of sustainable energy usually look at its effects on the environment, the economy and society. A nation or a society must find renewable energy to replace single-use energy such as fossil fuels, we must find other energy alternatives.
Noni : What benefits can we get if our school implements energy sustainability like solar panels?
Mr. Abid : Oh, the benefits that our school get? _____ there's a lot. The first, in terms of economy, it is usually more economical because renewable energy is usually not as expensive if used in the long term. The second one, our school doesn't depend on one energy source such as only depending on electricity, but, we can use solar panels.
Noni : Yes, _____ there's lot of benefits that we can get. But, is there any disadvantages experienced that must be overcome when using renewable energy sources, Mr.?
Mr. Abid : Hmm, _____ implementing energy sustainability might be difficult because it might not have been implemented elsewhere, that's the difficulty. However, if you ask about the drawbacks, in terms of cost, who knows, this energy could later become more expensive because its taxes have increased.
Noni : Wow, sounds reasonable. How do solar panels facilitate our school? And _____ with the implementation of solar panels in our school?
Mr. Abid : Actually, this solar panel can support 4 classrooms, but there are still many issues, such as insufficient cables. Overall, _____ with the need for sustainable energy because natural resources are depleting in this era. What about our future generations? We need to find alternative energy sources to replace the ones we are using so that natural resources don't run out.
