

Name: _____

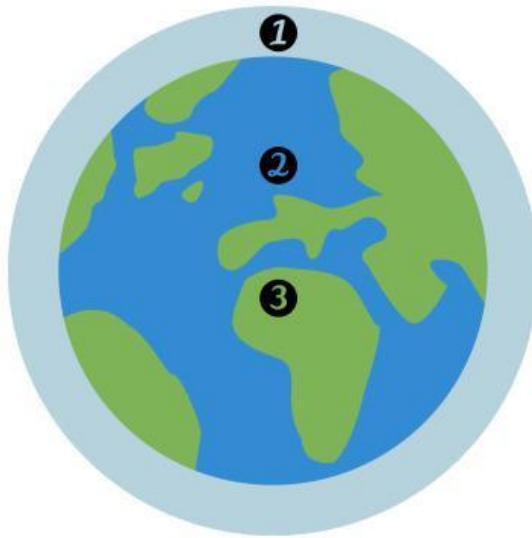

Date: _____

Class: _____

The Structure of the Earth

Components of the Earth

Match the components of the Earth to their names

☐

Geosphere

☐

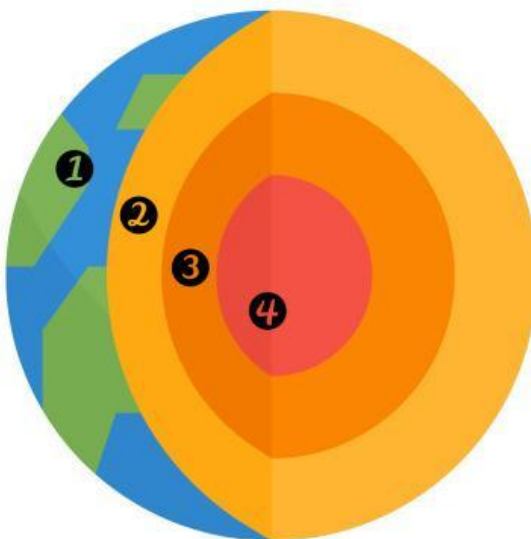

Atmosphere

☐

Hydrosphere

Layers of the Earth

Match the layers of the Earth to their names

☐

Mantle

☐

Crust

☐

Outer Core

☐

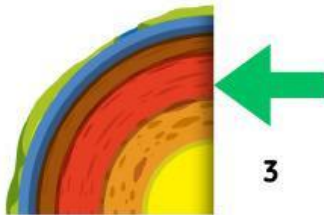

Inner Core

STRUCTURE OF THE EARTH

Sort & Review

Activity Instructions:

1. Cut out the boxes
2. Stick them underneath the correct heading in the table

This section is made of rock which is semi solid and moves very slowly like a liquid.	This section is made up of huge pieces of land called tectonic plates.	This is the middle section, sat between the centre and the outer section of the Earth.
This is the thickest section of the Earth.	This section is made of magnetic metals iron and nickel. This gives Earth its magnetic field.	
	This is the hottest part of the Earth.	This is the very centre of the Earth, which is divided into an inner solid layer and an outer liquid layer.
This is the rocky outer section of the Earth.		This section of the Earth is made of many elements but mostly oxygen and silicon.
