The element Al is in group _____ and Period _____ and has _____ valence electrons. An element that would react similarly to Al would be _____ because they have the _____. Al will react by _____ to form a _____.

I can see that Na has _____ electrons in total. The number of valence electrons for this atom is _____ and I can see that this element is in group 1. In order to have a full outer shell and be stable like the noble gasses, Na needs to _____ to become a _____. All elements in this _____ will react this way to become stable.

Location of Phosphorus in the Periodic Table

I can see that P has _____ electrons in total. The number of valence electrons for this atom is _____ and I can see that this element is in group 15. In order to have a full outer shell and be stable like the noble gasses, P needs to _____ to become a _____. All elements in this _____ will react this way to become stable.

Based on the image shown to the left, I can see that elements in each group have the same number of _____.

Group 1 → 1 ve Group 15 → 5 ve
Group 2 → 2 ve Group 16 → 6 ve
Group 13 → 3 ve Group 17 → 7 ve
Group 14 → 4 ve Group 18 → 8 ve

(Except He has 2ve)

- Metals have _____ Melting points
- Metals have _____ Boiling points
- Metals are _____ conductors of heat and electricity
- Metals will _____ electrons to form _____ when they react.
- Metals are _____ at room temperature.
- Metals have luster which means they are shiny
- Metals are _____

- Nonmetals have _____ Melting points
- Nonmetals have _____ Boiling points
- Nonmetals are _____ conductors of heat and electricity
- Nonmetals will _____ electrons to form _____ when they react.
- Nonmetals are _____ at room temperature.
- Nonmetals are dull in appearance
- Nonmetals are _____

- Metalloids are great _____ which is why we use them in computer chips, transistors, and solar panels.
