

environmental awareness

In recent years, environmental awareness has grown significantly. More people are making efforts to reduce their carbon footprint, but there are still many who don't realize the impact of their daily actions. Simple habits, like turning off lights when leaving a room, using reusable shopping bags, and walking or biking instead of driving, can make a big difference. However, large-scale changes are needed to combat climate change effectively. Governments and corporations must take responsibility and implement policies that promote sustainability. Without these changes, individual efforts, though important, may not be enough to reverse the damage already done.

- **What has grown significantly in recent years?**

- A) The use of plastic
- B) Environmental awareness
- C) Carbon emissions

- **What is an example of a simple habit that can make a big difference?**

- A) Using disposable bags
- B) Leaving lights on
- C) Turning off lights when leaving a room

- **Who must take responsibility to combat climate change effectively?**

- A) Governments and corporations
- B) Citizens only
- C) Environmental activists

- **What may not be enough to reverse the damage already done?**

- A) Government policies
- B) Corporate efforts
- C) Individual efforts
