

# What Lives in Forests?

A forest is a place with many trees. These trees grow close together. Many animals live in the different forests of the world. These animals use much of what is in the forest for food and shelter.

There are at least 3 main kinds of forests. Some forests are hot and wet like in the tropical rainforest. Some forests are cold and dry like in a coniferous forest.

Answer these questions:

1. What do you call a place that has many trees close together?
2. Tell how forests are different

Name these animals that are found in  
various forests of the world
