

Computation Thinking

1) What are the four cornerstones of computational thinking?

1:	2:	3:	4:
----	----	----	----

2) What is the name of the (==) operator?

--

3) What do we call decimal numbers in Python?

--

4) What is the difference between these two statements:

`x = 5` and `x = "5"`

In the 1 st one x's data type is	In the 2 nd one x's data type is
---	---

5) Which of the following code option is correct when inputting text values?

1:	2:	3:
----	----	----

6) What happens when the compiler executes the `x = input()` statement?

--

7) How do you read the following line of code?

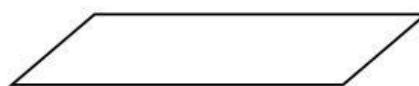

X = "Yes"	1:	2:
-----------	----	----

8) Which of the following functions is used to convert an inputted number value to decimal number?

1:	2:	3:
----	----	----

9) Name the following flowchart symbols.

1:	2:	3:
----	----	----

10) What are the different parts of the if statement in Python?

1:	2:	3:
----	----	----
